GROUP INFORMATION

1. Group leader:

Name: Asanda Botsoere

Student number: 42925894

Email address: 42925894@mynwu.ac.za

Group members:

2. Name: Kagiso Mononyane

Student number: 42803233

Email address: mononyanekagiso360@gmail.com

3. Name: Andile Sam

Student number: 41200705

Email address: 41200705@mynwu.ac.za

4. Name: Washington Sibuyi

Student number: 39718913

Email address: 39718913@mynwu.ac.za

5. Name: Tebogo Majola

Student number: 39500357

Email address: Majolatebogo81@gmail.com

GROUP TASK DISTRIBUTION

<u>TASK</u>	<u>Responsible group member</u>
(i) Create a single A4 poster that can be used for marketing and advertising the event to build awareness about and inform the public concerning the different worldviews.	ASANDA
(ii) Take the online worldview test and compile a statistical chart to illustrate your group's dominant, backup, and successive worldviews.	KAGISO
(iii) Use clear headings and write a brief commentary of no more than 500 words on each of the worldviews depicted in the chart. (Hint: use the feedback obtained from the worldview test)	SAM
(iv) Compile an infographic (e.g., mind map or collage) on a single A4 page to create a buzz around your offerings at the exhibition. The infographic must showcase the principles/core ideas of the relevant societal issue and propose the necessary approaches/strategies to combat the issue.	WASHINGTON
(v) Provide a motivation of not more than 500 words based on each of your group members' dominant worldview on why this issue is considered important and noteworthy in the field of education.	TEBOGO

WORLDVIEW CRISIS IN EDUCATION:

EXPLORATIONS OF POSTMODERNISM AND AN ETHIC OF CARE

Traditional worldview

Traditional worldview is based on preserving tradition and following the customs and practices of the past. It emphasizes social order, conformity, and obedience to authority. This worldview may be associated with more conservative or traditionalist political and social views.

Modern worldview

Modern worldview emphasizes the importance of science, rationality, and progress. It is often associated with the Western world and with industrialization and capitalism. This worldview holds that the world can be improved through the application of scientific knowledge and technology, and that humanity is capable of limitless progress. Some key aspects of the modern worldview include individualism, the belief in progress, the pursuit of efficiency, and the separation of public and private life.

Integrative worldview

The integrative worldview is a worldview that combines elements of different worldviews to create a unique and holistic perspective. It recognizes that there is no single correct way to view the world, and it integrates different ways of knowing and understanding. This worldview is often associated with people who are open-minded and curious, and who seek to understand the world in a holistic way.

Postmodern worldview

Postmodern is the worldview that questions the very idea of objective truth and universal values. It is often associated with skepticism, irony, and the belief that reality is socially constructed. This worldview holds that all knowledge is relative, and that there is no single, objective reality instead there are multiple realities that are shaped by individual experience and social context.

STATISTICAL CHART

A BRIEF COMMENTARY.

Traditional worldview: in the chart the traditional worldview is the most common perspective among the other participants, with three individuals falling into the category. This suggests a strong commitment to traditional customs, values, and guidance in fixed cultural or regional traditions. Their commitments tradition may stem from their upbringing, cultural backgrounds, or a deep respect for the wisdom passed down through generations.

Integrative Worldview: The integrative worldview is represented by two participants in the chart. Those who hold this perspective seek to mix and match elements from various belief systems and philosophies. They value the togetherness of different sides of life, including spirituality, culture, and science. Individuals with an integrative worldview might be drawn to thinkers who explore the intersection of mixed perspectives, such as the flexibility between psychology and mysticism.

Mixed Worldview: One participant in the chart falls under the mixed worldview category. Thinkers with a mixed worldview do not easily fit into traditional, modern, or postmodern categories. Instead, they construct their belief system by selectively including ideas from different philosophical traditions. This approach often leads to original and different perspectives that challenge established norms. The individual with a mixed worldview's beliefs is shaped by their personal experiences and the mixture of ideas that have had a great impact on their thinking.

Postmodern Worldview: The chart includes one participant with a postmodern worldview. Postmodernism is characterized by doubt towards large reports, absolute truths, and authority figures. Those who align with this perspective start to question the idea of objective reality and make a point the individual nature of human experiences. The individual with a postmodern worldview may be inclined to challenge established norms and hold a plurality of truths, reflecting the influence of thinkers who have deconstructed traditional structures of thought.

In summary, the distribution of worldviews in the chart reveals a difference of perspectives among the participants. While the traditional worldview is the most popular, individuals with integrative, mixed, and postmodern worldviews also contribute to the problem of human thought and belief. This difference highlights how individuals draw from different sources and experiences to shape their different understanding of the world, and how these worldviews continue to evolve in current society.

WORLDVIEW CRISIS IN EDUCATION

PARENTAL EDUCATION

Parents with lack of education may feel less confident in supporting their child's education, hence involving themselves in adult education can help them improve their knowledge.

LANGUAGE BARRIER

Non-native English-speaking parents may find it difficult to communicate effectively with the teachers including the the school staff, so getting involved in language classes, interpreting services can help them.

SOCIOECONOMIC STATUS

Parent with low income may be limited in getting resources that will be helpful their child's education. The school can offer financial support for school-related expenses.

TIME CONSTRAINTS

Parents who have busy work schedule can get limited time to participate in school programmes. the school can offer weekends or evening events and encourage involving through smaller, time flexible task.

TRANSPORT ISSUES

Lack of transport can be one of the reason that affects parents to attend meetings and activities. a transport can be offered for parents whom would like to attend the events.

Motivation

Social issue affecting education: **Parental involvement.**

The integration of traditional, modernist, and mixed worldviews has evolved in the ever-evolving field of education as a convincing answer to a recurring problem: parental engagement in schools. This issue has a significant impact on youths' overall development and extends beyond the walls of the classroom. We can start on an unusual path that promises to increase parental involvement in the educational process, developing well-rounded individuals, by uniting the qualities of these many worldviews.

modernity brought in an era of smart communication tools that may help to close the gap between parents and schools. However, there are times when the appeal of digital solutions can overshadow the value of real human contact. Dependence too heavily on technology may accidentally exclude parents from modern communication platforms or those who lack digital experience.

A strong solution is revealed by the complex interaction of different worldviews. We can create a more comprehensive and inclusive approach to parental involvement in education by carefully combining parts of tradition and modern. This strategy transforms parental involvement as an engaging partnership that exceeds the walls of school and knows parents as active participants in their kid's educational journeys.

By utilizing the knowledge of tradition, educational institutions can greatly enhance parents' feelings of community and belonging. A learning environment where all parents feel respected and accepted can be created by putting values like respect for cultural diversity and inclusive practices into the core of the educational experience.

modernism offers access to greater connection and transparency. Schools can use digital platforms to share essential academic assets facilitate immediate updates on progress of learners and communicate information about future events. In order to ensure that digital tools enhance rather than replace the personal bonds that are the foundation of this relationship, face-to-face encounters should continue to be a crucial part of parental involvement.

In addition to solving the issue of parental involvement, the merging of mixed, traditional, and modernist worldviews changes education as a shared, inclusive, and complete career. It encourages a strong sense of shared responsibility and empowers parents to take an active role in their children's educational journeys.
